Most men desire more sex, more often — and occasionally, with more women — than their hearts can desire (which is probably more than they need anyway). But for those guys who don't receive sex, or don't receive as much as they'd like to, there's hope for you yet.

The average male has eight sexual partners in his lifetime — but for the men with the knowledge to obtain sex at-will... they have sex with that many women during their summer vacation.

This book will not teach you how to create meaningful, long-lasting relationships. But if you only want cheap sex and fun times, this is the book for you!

First let's look at some ratios:

Considering 52% of the population in the United States is women, there's more than enough potential sex partners to go around. Black males fare even better; with African-American women outnumbering men *nine-to-one*... so there's always a surplus of African-American women for guys of any race, if that's your preference.

Also consider this: 12% of American males are homosexual — and this ratio is actually higher because it does not include bisexual males, or “closet” homosexuals, which are groups who typically don't report their true sexuality in surveys.

Additionally, only 4% of American woman categorize themselves as *masculine* lesbians (better known by it's politically incorrect term “Butch”). Disregard the amount of women who refer to themselves as *feminine* lesbians or bisexual ladies because they still like penis — even if it's attached to a strap-on belt. Those women are still receptive to heterosexual sex... as long as it's with the right guy. In fact, I've had several sexual experiences with lesbian couples who wanted to have a baby so they could be a “complete family”, so both women would agree to have sex with me (repeatedly) in hopes that one of them would get pregnant with “their” child. {Say what you want to say about me, fellas... but being a surrogate sperm donor has it's rewards.}

That increases the ratio of women to heterosexual men exponentially. And by the laws of supply & demand, penis is a rare commodity.

So why don't you have a harem? Heck, why don't some guys score at all?

This book will dissect and examine every element a man must consider within the first three days of meeting a potential suitor. Although every man has different obstacles, these rules will work regardless of his physical attributes, economic status, or educational background.
